Front-End Developer

Driven Software Engineer and Tech Educator with a passion for React-based front-end development. Over a decade of experience in Project Management, Product Development, and Quality Assurance. Thrives in environments where “wearing multiple hats” is the norm while ensuring technical requirements and product prerequisites are attained. Passionate about learning new technologies, teamwork, and exceeding expectations.

TECHNICAL SKILLS

Languages: JavaScript, HTML5, CSS3, SQL, GraphQL, Java

Frameworks/Libraries: React.js, React Native, Redux.js, Node.js, Express.js, jQuery, Bootstrap, Materialize, Material UI

Databases: MongoDB, MySQL, PostgreSQL, Firebase

Cloud Platforms: Heroku, AWS (EC2, Elastic Beanstalk, API Gateway, Lambda, S3, IAM, CloudWatch, DynamoDB)

Testing: Mocha, Chai, Jest, Enzyme

EDUCATION

University of North Carolina at Chapel Hill, Chapel Hill, NC

2017

The Coding Boot Camp at UNC-Chapel Hill: Full Stack Web Development

An intensive 24-week program dedicated to designing and building full-stack web applications.

University of St. Thomas, St. Paul, MN

1997 - 2001

B.A. Quantitative Methods and Computer Science

APPLICATIONS BUILT

Thoughtline

Description: Thoughtline is a journaling platform built with the MERN stack that provides users with the ability to compose, archive, and share their thoughts about friends and loved ones. Using the React/Redux front end, users can create an account, store friends (either privately or they can connect with other Thoughtline users in order to share thoughts), compose thoughts about a particular friend, view a timeline of thoughts they’ve composed, send messages to other users, search through sent or received messages, search for users via email, and send invites to users to join the platform. Users are also able to convert their private friends (i.e. the private friend is not associated with an existing user) to an existing user, replacing the private friend’s information with the existing user’s information while maintaining all previously composed thoughts.

Technologies used: React.js, React Native, Redux.js, Material UI, Node.js, Express.js, JSON Web Tokens, RESTful APIs, MongoDB (mLab), Amazon S3, Heroku, Responsive Design

DevConnector

Description: DevConnector is a developer-focused social platform that allows users to communicate with their peers and showcase their developer credentials. Users can create profiles (with detailed information on their technical skills, educational and work experience, and the user’s most recent GitHub repositories), view a list of all developers on the platform, and create posts that can be liked/unliked and commented on by other users. The Node.js/Express.js server features over 20 endpoints that handle authenticating users, Create/Read/Update/Delete operations for user validation (using the passport.js JSON Web Token strategy), profile and post data, and extensive input validation and error handling.

Technologies used: React.js, Redux, Bootstrap, Node.js, Express.js, JWT, RESTful APIs, MongoDB (mLab)

APPLICATIONS BUILT (CONTINUED)

Blockchain-Explorer

Description: Blockchain-Explorer is a full-stack application that I created to learn how blockchain technology works on a code level. It allows the user to create a network of nodes, with each node housing an instance of the blockchain data structure along with all of the routes needed to connect nodes to the network, create transactions, mine blocks (complete with Proof of Work) and broadcast them to the network, use a Consensus Algorithm to verify chain validity, and search the node for blocks, transactions, or node data. The front end was built as an educational tool, guiding users through the process of working with a blockchain while being informed how a blockchain works at the code level.

Technologies used: HTML, CSS, Materialize, JavaScript, jQuery, Node.js, Express.js, NPM, RESTful APIs, Blockchain

PROFESSIONAL EXPERIENCE

University of Washington Professional & Continuing Education - Coding Boot Camp, Seattle, WA 2/2019 to Present

Primary Teaching Assistant

Instructs, coaches, and supports a cohort of over 50 students taking part in a coding boot camp that starts by teaching web development fundamentals (i.e. HTML/CSS/JS/Git) and concludes with students creating full-stack web applications utilizing the MERN stack(MongoDB, Express.js, React.js, Node.js). Leads classroom discussions, guides student inquiries and helps develop critical thinking. Emphasizes the meta-skills and core concepts of software engineering. Supports students in their projects, coursework, and hackathons, while providing feedback and guidance to students to help create outstanding future developers.

TRILOGY EDUCATION SERVICES, Seattle, WA 12/2017 to Present

Senior Full Stack Web Development Tutor

Tutor a roster of over 95 students (700 sessions) taking part in Full Stack Web Development coding boot camps at leading universities throughout the US. Coach students and help unlock their potential in languages and technologies such as Git, HTML, CSS, Bootstrap, JavaScript, jQuery, Node.js, Express.js, React.js, Handlebars, MongoDB, Firebase, and SQL.

TOPICS ENTERTAINMENT, Renton, WA 11/2014 to 10/2016

Product Manager

Oversaw language-learning product lines; executed all aspects of product development, production, quality assurance, e-commerce sales, and customer service. Interfaced with offshore software developers to ensure product vision, software stability, and delivery deadlines. Collaborated with replication and printing vendors, finding efficiencies while ensuring inventory forecasts met needs of salespeople and business requirements.

- Spearheaded development of retail Instant Immersion language learning product lines which shipped over 50k units in 2015 – 16, accounting for 43% of company's gross revenue.
- Overhauled TOPICS presence on Amazon in 3 months, streamlining active product catalog from nearly 3K titles (including legacy titles) to 894, enriching detail pages for marquee titles, and increasing weekly sales on newer product lines by 235%.
- Increased First Contact Resolution (FCR) rate on customer service emails by 40% through revised standards and procedures, and product implementations.
